

The latest cancer treatment technology is in Altoona

“Radiosurgery uses a highly focused radiation that is so precise it’s like doing surgery but without cutting the patient.”

— **Dr. Marsha Haley**
Radiation Oncologist
Former UPMC Chief Resident

**Altoona Regional
Health System**

Center for Cancer Care

A nonprofit community health care system

The Elekta Synergy® S is a revolutionary linear accelerator that precisely targets and kills tumors.

It allows our specialists to track tumor changes on a daily basis before each treatment. They can then isolate the cancer for radiation beam treatment and protect the surrounding, healthy tissue.

Because the beam is so exact, we can deliver higher doses. That means shorter treatments and often can mean fewer treatments for you.
